call for participation

36th chaos communication congress
27-30 december 2019 in leipzig
call for participation track hardware

Track hardware at 36C3 is all about developing and creatively using things that allow the digital to make a physical impression.

On the one hand, our focus is on the whole process from architecture, planning, creation and debugging of things of all kinds ranging from textiles, musical instruments, robots, means of transporting people and mate, launching stuff into space, alternative energy supplies to medical tools – everything that actually requires getting our hands dirty.

On the other hand, we're acutely aware of the need balance building hardware and sustaining a liveable planet. So please tell us your stories about the expansion, repair, regaining sovereign use of technology and liberation of proprietary systems – from the decapped smart-card to the firmware of your toaster to a modified agricultural machine.

Of course, we're open to surprises: hit us with all the things we can't imagine yet – and of course rockets!

The **Chaos Communication Congress** is the Chaos Computer Club's annual symposium and hacker party.

During four days between Christmas and New Year's Eve, thousands of hackers, technology freaks, artists, and utopians get together in Leipzig to communicate, learn from each other, and party together.

We focus on topics such as information technology, digital security, making, and breaking.

We engage in creative, sceptical discourse on the interaction between technology and society.

We'd love to see your submission for 363C to our conference planning system at **https://frab.cccv.de/cfp/36c3** until 26 October 2019 (23:59 UTC). Notice of acceptance is due 11 November 2019.
