call for participation

36th chaos communication congress
27-30 december 2019 in leipzig
call for participation track science

The world is a complex place and improving our understanding of it is more urgent than ever. In light of pressing issues such as the impending destabilisation of our climate, or technological developments that have the potential to disrupt our social, cultural, and economic systems, ignorance is clearly not an option anymore.

Track science is looking for contributions that increase our understanding of these pressing issues from a scientific perspective.

If you happen to know the nitty-gritty details of, e.g., climate feedback loops, ecological or social systems, renewable energy, sustainable farming, artifical (general) intelligence, gene editing, city development, or if you think you can shine a light in other areas you feel that a broad audience needs to know about, please submit a talk that doesn't stop at the basics!

The **Chaos Communication Congress** is the Chaos Computer Club's annual symposium and hacker party.

During four days between Christmas and New Year's Eve, thousands of hackers, technology freaks, artists, and utopians get together in Leipzig to communicate, learn from each other, and party together.

We focus on topics such as information technology, digital security, making, and breaking.

We engage in creative, sceptical discourse on the interaction between technology and society.

We'd love to see your submission for 363C to our conference planning system at **https://frab.cccv.de/cfp/36c3** until 26 October 2019 (23:59 UTC). Notice of acceptance is due 11 November 2019.
