

call for participation

36th chaos communication congress 27-30 december 2019 in leipzig call for participation **track security**

Track security is looking for content demonstrating the influence of security aspects on users and machines. We would therefore like to request technical submissions focusing on security problems and solutions in both, hardware and software.

If you want to share your discoveries with thousands of fellow security enthusiasts, if you have developed new solutions to previously unsolved problems, or if you have found new problems which we knew nothing about, we want you to present.

This year we dedicate some of our slots to beginners and people who are interested in the relevant basics. As part of this year's foundations initiative, we are also looking for submissions with a loose connection to security.

This includes topics from mathematics, networks, operating systems, web technologies, memory (mis)management, cryptography, programming languages, hardware design and other fields.

The **Chaos Communication Congress** is the Chaos Computer Club's annual symposium and hacker party.

During four days between Christmas and New Year's Eve, thousands of hackers, technology freaks, artists, and utopians get together in Leipzig to communicate, learn from each other, and party together.

We focus on topics such as information technology, digital security, making, and breaking.

We engage in creative, sceptical discourse on the interaction between technology and society.

We'd love to see your submission for 363C to our conference planning system at <https://frab.cccv.de/cfp/36c3> until 26 October 2019 (23:59 UTC). Notice of acceptance is due 11 November 2019.
